What do temps represent?

## Average Temperature of Observation for Each Species

Species	Average Temperature	Temperature Standard Deviation	Number of Observations	Minimum Temperature	Maximum Temperature
Northern Red-legged Frog	4.4	---	1	4.4	4.4
Tailed Frog	7.0	3.0	3	4	10
Arizona Toad	10.0	---	1	10	10
Strecker's Chorus Frog	10.5	2.0	11	9	16
Oregon Spotted Frog	11.0	15.5	2	0	22
New Jersey Chorus Frog	11.5	4.5	17	3	22
Wood Frog	12.5	5.5	897	0	28.8
Spring Peeper	13.2	5.6	569	-1	32
Red-legged Frog	13.3	5.9	16	4	27

What units?

How?

Where?

# What are metadata?

Metadata are: Data about Data

WHO created the data?

WHAT is the content of the data?

WHEN were the data created?

WHERE is it geographically?

WHY were the data developed?

## EDI Metadata Template (2017)<sup>1</sup>

Data should be in csv text file. If starting with an Excel spreadsheet, please make sure it does not contain any formulas and comments on cells. If you need comments put them in their own column. If data were used in a database and major table linking is necessary to analyze, please de-normalize into a flat file, not just database table exports.

### Dataset Title

(be descriptive, more than 5 words):

**Short name or nickname you use to refer to this dataset:**

### Abstract

(include what, why, where, when, and how)

### Investigators

(list in order as for a paper with e-mail addresses, organization and preferably ORCID ID, if you don't have one, get it, it's easy and free: <http://orcid.org/>) add table rows as needed

First Name	Last Name	Organization	e-mail address	ORCID ID (optional)

### Other personnel names and roles

(field crew, data entry etc. with e-mail addresses, organization and ORCID ID)

First Name	Last Name	Organization	e-mail address	ORCID ID (optional)	Role in project

### Keywords

(list and separate by comma, please check out these resources <http://vocab.ternet.edu/>.) Please determine one or two keywords that best describe your lab, station, and/or project (e.g., Trout Lake Station, NTL LTER, UW Center for Limnology).

<sup>1</sup> This document liberally borrows from similar documents at SBC and GCE

### Funding of this work:

Add rows to table if several grants were involved, list only the main PI, start with main grant first:

PI First Name	PI Last Name	PI ORCID ID (optional)	Title of Grant	Funding Agency	Funding Identification Number

### Timeframe

- Begin date
- End date
- Data collection ongoing/completed

### Geographic location

- Verbal description:
- North bounding coordinates (decimals)
- South bounding coordinates (decimals)
- East bounding coordinates (decimals)
- West bounding coordinates (decimals)

### Taxonomic species or groups

### Methods

(please be specific, include instrument descriptions, or point to a protocol online, if this is a data compilation please specify datasets used, preferably their DOI or URL plus general citation information)

### Data Table

- Column name: exactly as it appears in the dataset. Please avoid special characters, dashes and spaces.
- Description: please be specific, it can be lengthy
- Unit: please avoid special characters and describe units in this pattern: e.g. `microSiemenPerCentimeter`, `microgramsPerLiter`, `absorptionPerMolePerCentimeter`
- Code explanation: if you use codes in your column, please explain in this way: e.g. LR=Little Rock Lake, A=Sample suspect, J=Nonstandard routine followed
- Date format: please tell us exactly how the date and time is formatted: e.g. `mm/dd/yyyy`, `hh:mm:ss` plus the time zone and whether or not daylight savings was observed.
- If a code for 'no data' is used, please specify: e.g. -99999

To make these metadata useful for data discovery and re-use, computers must be able to extract information from them. The metadata must be standardized.

Column name	Description	Unit or code explanation or date format	Empty value code
Species	Common name of frog		
Average Temperature	Average temperature of frog's skin	<code>celsius</code>	-9999.99
Temperature Standard Deviation	Standard deviation of temperature of the frog's skin	<code>celsius</code>	-9999.99

# Two Metadata Files: Standardizing Content and Structure

---

Gaiser, Evelyn  
Water Quality Data from Shark River Slough  
Data were collected monthly

Water Quality Data from Shark River Slough,  
Florida Everglades National Park from June 1,  
2000 to March 30, 2017  
Grab samples were collected once a month  
Collected by Evelyn Gaiser

Different content and different structure

# Standardizing Content:

---

Originator: Evelyn Gaiser  
Water Quality Data from Shark River Slough  
in the Everglades National Park  
BeginDate: 2000-06-01  
EndDate: 2017-03-30  
Methods: Data were collected monthly using  
grab samples

Water Quality Data from Shark River Slough,  
Everglades National Park from June 1, 2000  
to March 30, 2017  
Methods: Grab samples were collected once  
a month  
Originator: Evelyn Gaiser

Content is standardized, but structure is not

# Standardizing Structure:

---

```
<title>Water Quality Data from Shark River  
Slough, Everglades National Park</title>  
<originator>  
  <firstName>Evelyn</lastName>  
  <lastName>Gaiser</lastName>  
</originator>  
<method>Grab samples of water were  
collected monthly </method>  
<date>  
  <begin>2000-06-01</begin>  
  <end>2017-03-30</begin>  
</date>
```

```
<title>Water Quality Data from Shark River  
Slough, Everglades National Park</title>  
<originator>  
  <firstName>Evelyn</lastName>  
  <lastName>Gaiser</lastName>  
</originator>  
<method>Grab samples of water were  
collected monthly </method>  
<date>  
  <begin>2000-06-01</begin>  
  <end>2017-03-30</begin>  
</date>
```

Content and structure are standardized, making it easy for computers to automatically extract information from the metadata

# Ecological Metadata Language (EML)

---

- Developed for documenting ecological and environmental datasets
- Based on previous work done by the Ecological Society of America
- Implemented in XML
  - Tags surrounding content that describe its meaning
  - A markup language that defines a set of rules for encoding documents in a format that is machine-readable

+/- Keywords

### By Thesaurus:

LTERR FCE, Florida Coastal Everglades LTER, ecological research, long-term monitoring, productivity, primary production, Taylor Slough, Shark River Slough, periphyton, water, incubation, substrates, processes, net carbon production, respiration, gross production per mass

+/- Methods and Protocols

These methods, instrumentation and/or protocols apply to all data in this dataset:

### Protocols and/or Procedures

Description: A known volume of periphyton was collected from substrates (stems of emergent macrophytes, metaphyton, periphytometer slides, and/or benthos) and placed in light and dark BOD bottles. O<sub>2</sub> was measured before and after 4 hours of incubation at ambient light. Light at the incubation depth was measured with a LiCor for the duration of incubations. Control bottles contained filtered in situ water. All bottles were brought back to the lab on ice and processed to calculate the mass of incubated mat.

## R Code

Package ID: knb-lter-fce.1107.7

File Download: knb-lter-fce.1107.7.r

Instructions: Download the R program and open it in R to run. Alternatively, you can copy and paste the program code into the R console.

For datasets that require authenticated access to data tables, you may need to download the data separately and alter the `infile` <- lines to reflect where the data is stored on your computer.

Code:

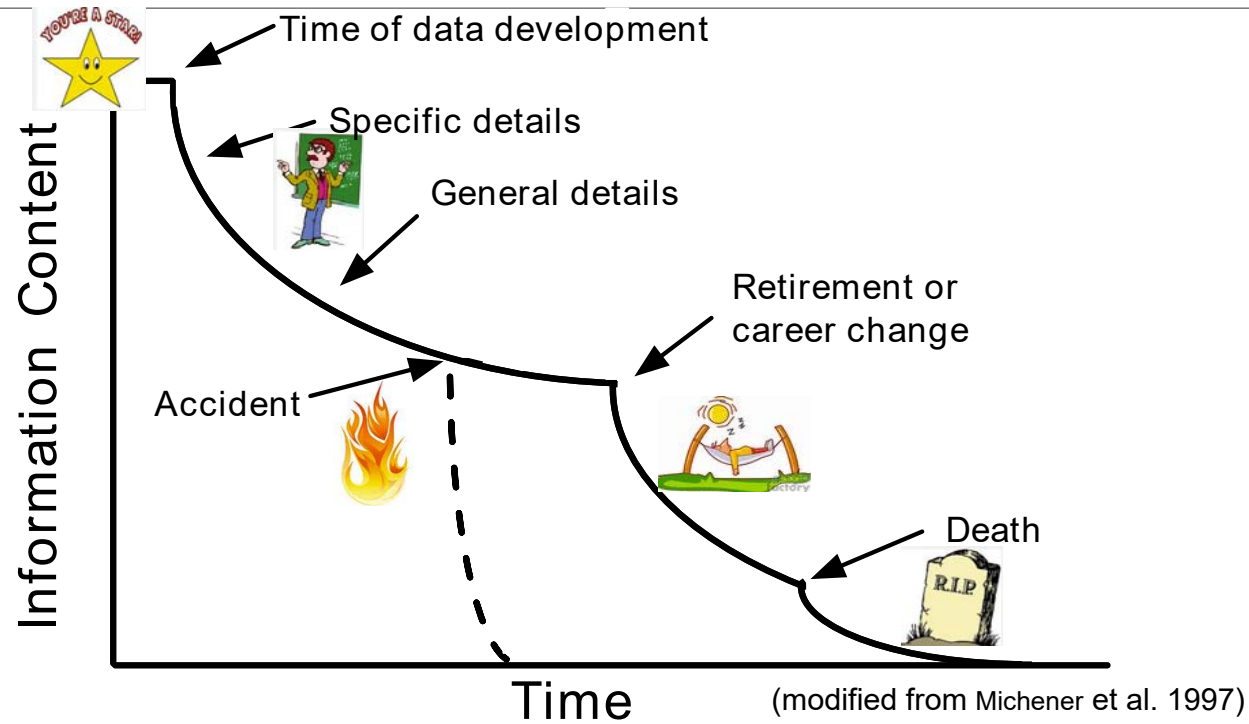

```
# Contact: - Information Manager Florida Coastal Everglades LTER Program - fcelter@fiu.edu
# Stylesheet for metadata conversion into program: John H. Porter, Univ. Virginia, jporter@virginia.edu

infile1 <- "https://pasta.lternet.edu/package/data/eml/knb-lter-fce/1107/7/ac394fca14259073329ffe19ecf096f6"
infile1 <- sub("https:", "http:", infile1)
dt1 <- read.csv(infile1, header=F
  , skip=1
  , sep=","
  , col.names=c(
    "PROJECT",
    "Group",
    "Transect",
    "Site",
    "Substrate",
    "Replicate",
    "Date",
    "Net_Carbon_Production",
    "Net_Respiration",
    "GrossProductionPerMass" ), check.names=TRUE)

# Fix any interval or ratio columns mistakenly read in as nominal and nominal columns read as numeric or dates read as strings

if (class(dt1$PROJECT)!="factor") dt1$PROJECT<- as.factor(dt1$PROJECT)
if (class(dt1$Group)!="factor") dt1$Group<- as.factor(dt1$Group)
if (class(dt1$Transect)!="factor") dt1$Transect<- as.factor(dt1$Transect)
```

# What is the Value of Metadata to Data Creators and the Organizations they work for ?

---

Metadata allows data developers to:

- Preserve investment in research project
- Re-use data after initial intended purpose
- Publicize efforts – promote the work of a scientist and his/her contributions to a field of study through citations

For organizations, metadata transcend people and time:

- Offers data permanence
  - Creates institutional memory
  - Advertises an organization's research
  - Creates possible new partnerships and collaborations through data sharing
- 

# Tips for Writing Quality Metadata

---

## Titles, Titles, Titles...

Titles are critical in helping readers find your data

- While individuals are searching for the most appropriate datasets, they are most likely going to use the title as the first criteria to determine if a dataset meets their needs.

A complete title includes: What, Where, and When (and Who, if relevant)

# Tips for Writing Quality Metadata

A Clear Choice: Which title is better?

---

Periphyton

OR

Periphyton Abundance data collected by FOELTER from Northeast Shark River Slough, Everglades National Park, Florida from September 2006 to September 2008

Periphyton abundance data (what) collected by FOELTER (who) from Northeast Shark River Slough, Everglades National Park, Florida (where) from September 2006 to September 2008 (when)

# Tips for Writing Quality Metadata

---

Select keywords wisely

Use a thesaurus or a controlled vocabulary for keywords whenever possible

CC image by Marco Arment on Flickr

# A thesaurus:

---

- Restricted list of words or terms
  - Has a hierarchical structure
  - Has broader than, narrower than, and related to terms
  - Has preferred terms
  - Is used to organize, categorize and index information for subsequent retrieval.
- 

# LTERR Thesaurus (vocab.lternet.edu)

The image shows a screenshot of the LTER Thesaurus website (vocab.lternet.edu) with the 'processes' category selected. The left sidebar contains a navigation menu with categories: organizational units, disciplines, events, measurements, methods, **processes** (highlighted with a blue box), substances, substrates, ecosystems, and organisms. Below the menu is a keyboard-style navigation bar with letters A, B, C, D, and a search bar.

The main content area displays the 'processes' category with a list of terms and their relationships. The terms are organized into two columns. The right-hand column contains a list of terms, with 'NT4 bulk deposition' highlighted by a red box. Blue arrows point to 'NT1 physical processes [+]' and 'NT3 deposition [+]' in the left-hand column, and 'NT2 atmospheric processes [-]' and 'NT3 deposition [-]' in the right-hand column.

# Summary

---

A metadata record captures critical information about the content of a dataset

Metadata allow data to be discovered, accessed, and re-used

Metadata is of critical importance to data developers, data users, and organizations

Metadata completes a dataset
