PROJECTS

2011 — 2012

RBC GAM

Was engaged in a Senior Web Developer role in a small team to design, build, and support a set of frameworks, utilizing ASP.Net MVC and HTML5. Built several products with the frameworks mentioned, including a user management system, a framework for ACL, and several business applications. Heavily utilized Twitter Bootstrap, jQuery, jQueryUI frameworks along with custom javascript code to handle complex data entry scenarios, including ajax validation and processing. Built a scheduler application with web interface, that allowed users to set up various data downloads from external vendors. It featured a simple to use UI and a system of notifications via email. Another application was a fund performance simulator, for which I have developed a UI, that allowed people to set up various parameters of the simulation. It featured a complex matrix of interdependent controls where changing a parameter would affect options for other controls.

2008 — 2011

Global Fleet Management

Designed and wrote large portions for a GPS tracking SaaS platform, including, but not limited to, fully dynamic map interface powered by Ajax and Web Sockets to display information about hundreds of vehicles in real time, using JavaScript, MooTools framework and Google Maps API. Wrote most of the client facing forms and also a back office application for internal use by sales and support personnel. Developed a custom ORM solution based on MySQL. Wrote Node.JS backend to integrate the web site with our RabbitMQ backend, passing thousands of location and state messages per second. Wrote a mobile web site using ASP.MVC and jQuery mobile.

2006 — 2007

Phillips, Hager & North

Worked as a consultant for an investment management firm, helping them to build a custom solution to provide clients with pricing and trading controls utilizing the DotNetNuke CMS.

2005 — 2006

Cougar TG

Worked on an e-commerce system for a Vancouver software manufacturer company. Developed visuals and business logic to perform various up-sells, cross-sells and promotions, using vanilla ASP.Net Web Forms and MS SQL Server.

STACK

Languages

- C#, JavaScript, Scala, PHP

Markup & FrontEnd

- HTML5
- CSS, LESS
- Bootstrap
- jQuery, jQMobile, MooTools, WebSockets
- WPF / Silverlight
- L^AT_EX

Backend

- IIS / Apache / Nginx
- CouchDB / Riak
- RabbitMQ
- Node.js

DevOps

- GIT / SVN
- Trac / Indefero / Bugzilla
- Jenkins, CruiseControl.Net

INTERESTS

Natural Languages

- Japanese
- Esperanto

Computer Languages

- Haskell
- F#
- Erlang

Frameworks & Technologies

- FubuMVC
- Play Framework
